**NOTIFICATION FOR COMMENCEMENT OF SURFACE WATER 59 (SW 59)
INVESTIGATION ACTIVITIES - PJL 010 95**

Action Approve start date of SW 59 investigation

This letter is written to notify the Department of Energy (DOE) that investigation activities adjacent to the SW 59 seep are scheduled to begin on February 14 1995. The scope of the investigation is managed by an Integrated Work Control Package (IWCP) and will be performed by Operable Unit 2 (OU 2) Field Treatment Unit (FTU) subcontracted personnel under a revised OU 2 FTU Health and Safety Plan. The excavation will encompass an area that is approximately one foot wide twenty feet long and three feet deep. Excavated soil will be packaged into approximately 10 Investigative Derived Material Drums and characterized for hazardous constituents as outlined in the IWCP. Because historical data indicate the seep to be contaminated with volatile organic compounds (including F001 constituents) and radionuclides samples will be collected for waste acceptance criteria as mandated by Envirocare. If the soil is determined to be a low level mixed waste the additional sampling will allow for off site disposal of the material at the Envirocare Facility located in Utah. Because the scope of this intrusive investigation will be to identify moisture in the soil activities will be delayed if near freezing temperatures exist.

Unless further notification is provided by February 13 1995 EG&G Rocky Flats Inc will assume a start date of February 14 1995 will be acceptable for DOE.

If you have any questions or require additional information please contact Jeff Bray at extension 8533 or digital page 6143
